

PagoYa — Data Signal Inventory

71 data points · Internal reference · July 2026 · Confidential

PTI Score + Component Breakdown

27 signals — *pti_export_safe* view

#	Field	Description	Status
1	pti_score	PagoYa Trust Index (0–100)	Live
2	pti_b2b_score	Mapped to 350–850 credit scale	Live
3	pti_score_band	Decile band (0–100 in steps of 10)	Live
4	pti_trajectory	rising / stable / falling (30d)	Live
5	pr_score	Payment Regularity component (0–30)	Live
6	bc_score	Biller Coverage component (0–20)	Live
7	ed_score	Engagement Depth component (0–25)	Live
8	cf_score	Credit Formation component (0–25)	Live
9	avg_monthly_load_amount	Avg MXN loaded to wallet per month	Live
10	load_amount_stddev	Std deviation of monthly loads	Live
11	income_regularity_score	CV-derived income regularity (0–100)	Live
12	dominant_payday_window	1-7 / 8-15 / 16-23 / 24+ payday cluster	Live
13	payday_consistency	Score: how stable is the payday window	Live
14	monthly_bill_obligations	Avg monthly bill spend (MXN)	Live
15	wallet_load_to_bill_ratio	Loads vs obligations ratio	Live
16	essential_bill_ratio	% of spend on CFE/agua/gas/predial	Live
17	platform_tenure_days	Days since first payment	Live
18	active_months	Months with ≥1 confirmed payment	Live
19	longest_gap_days	Longest gap between payments (days)	Live
20	advance_payment_days_avg	Avg days paid before due date	Live
21	self_initiated_ratio	Self-started vs reminder-triggered payments	Live
22	payment_amount_volatility	CV of payment amounts across billers	Live
23	recovery_score	Rate of returning after 30d+ payment gaps	Live
24	financial_curiosity_index	Paula savings/PTI questions vs total	Live
25	colonia	Neighborhood label (k-anon enforced)	Live
26	model_version	PTI model version tag	Live
27	score_month	Month of computation (YYYY-MM)	Live

PTI Trend Vectors

4 signals — *pti_trend_snapshots*

#	Field	Description	Status
28	velocity	Weekly PTI point change (30d average)	Live
29	trend_30d	PTI delta vs 30 days ago	Live
30	trend_60d	PTI delta vs 60 days ago	Live
31	trend_90d	PTI delta vs 90 days ago	Live

Behavioral Score Components

10 signals — *credit_profiles (existing)*

#	Field	Description	Status
32	pago_score	PagoScore composite (payment behavior)	Live
33	payment_score	On-time payment sub-score	Live
34	routine_score	Payment routine consistency sub-score	Live
35	engagement_score	App engagement sub-score	Live
36	wallet_score	Wallet activity sub-score	Live
37	social_score	Referral/social engagement sub-score	Live
38	total_events	Total scored behavioral events	Live
39	bills_paid	Lifetime confirmed bill payments	Live
40	avg_days_before_due	Avg days before due date (historical)	Live
41	login_streak_days	Current consecutive active days	Live

Paula Engagement

3 signals — *users table*

#	Field	Description	Status
42	coaching_responsiveness	ENGAGED / PASSIVE / OPTED_OUT	Live
43	financial_literacy_score	Score from Paula module interactions	Live
44	modules_unlocked	Count of Paula modules completed	Live

Identity & Device Signals

6 signals — *users + user_device_log*

#	Field	Description	Status
45	kyc_tier	KYC level: basic / enhanced / premium	Live
46	colonia_label	Validated neighborhood (INEGI)	Live

#	Field	Description	Status
47	device_first_seen_at	Date of first device fingerprint	Live
48	device_consistency_score	Tenure on current device (0–100)	Live
49	oxxo_load_count	Lifetime OXXO wallet loads	Live
50	card_load_count	Lifetime card-to-wallet loads	Live

NEW — Enrichment Signals

8 signals — *credit_profiles* (added v3.0)

#	Field	Description	Status
51	biller_count_slope_90d	Linear trend of active billers (90d)	✦ New
52	biller_count_slope_n	Snapshot count (reliability floor: $N \geq 3$)	✦ New
53	payment_amount_cv	CV of payment amounts per service	✦ New
54	payment_amount_cv_n	Payment count (reliability floor: $N \geq 8$)	✦ New
55	priority_rank_json	Implicit bill priority order under pressure	✦ New
56	priority_rank_n	Multi-bill-day events (reliability: $N \geq 3$)	✦ New
57	partial_payment_count	Bills paid below amount_due (CFE/Telmex)	✦ New
58	enrichment_computed_at	Freshness timestamp of above signals	✦ New

NEW — Per-Transaction Capture

4 signals — *bill_payments* columns + derived

#	Field	Description	Status
59	channel	wallet_balance / card_direct per payment	✦ New
60	days_from_due	+early / –late days relative to payment_day	✦ New
61	amount_due_mxn	Billed amount from provider (CFE/Telmex only)	✦ New
62	wallet_pct	% of bills paid from wallet (90d)	✦ New (derived)

NEW — Payment Timing Signals

3 signals — *derived from days_from_due*

#	Field	Description	Status
63	avg_days_from_due	Mean days early (+) or late (–), 90d	✦ New
64	early_late_ratio	Fraction of bills paid before due date	✦ New
65	card_pct	% of bills paid directly via card (90d)	✦ New

NEW — Missed & Cure Behavior

3 signals — *expected_payments* table

#	Field	Description	Status
66	bills_paid_90d	Expected payments fulfilled in 90d	◆ New
67	bills_missed_90d	Expected payments missed (5d+ overdue)	◆ New
68	cure_rate	Missed bills later paid (cure conversion rate)	◆ New

NEW — Paula Response Latency

2 signals — paula_response_metrics table

#	Field	Description	Status
69	nudge_response_bucket	same_day / same_week / slow / ignored	◆ New
70	avg_response_latency_h	Hours to first reply after Paula nudge	◆ New

NEW — Data Quality Surface

1 signal — B2B API meta-layer

#	Field	Description	Status
71	data_reliability	Per-field: reliable / below_minimum_n / no_data	◆ New

Fields marked ◆ New added in Pre-FI Enrichment Sprint (July 2026). ◆ New (derived) = computed from new capture fields at query time.

Minimum-N floors: payment_amount_cv requires $N \geq 8$ payments per service; biller_count_slope_90d requires $N \geq 3$ snapshots; priority_rank requires $N \geq 3$ multi-bill-day events — NULL returned below floor. partial_payment_count NULL when amount_due_mxn absent (CFE/Telmex only until biller-API pull). No telefono is ever returned by the B2B API. All lookups use SHA-256(telefono + salt).
